

Valley High School Expansion
Santa Ana, California

Santa Ana Unified School District retained MVE to assist with modernization and expansion of the new Science Complex for this 40-year old Valley High School campus. The recent adoption and implementation of new curriculum revealed that the campus had insufficient facilities to accommodate the science program.

The expansion will supplement the four existing science classrooms with the

construction of 16 science classrooms and 12 standard classrooms accommodating 32 student class sizes, along with restroom facilities, conference rooms and storage rooms. The two-story Science Complex will provide students with a new and enhanced learning environment that will embrace the science and technology disciplines, as well as create a new front door to the campus arrival sequence.
