

Boy Scouts of America Outdoor Education Center - Graphic Design and Creative Services
Irvine, California

Utilizing unique design and fabrication methods, MVE created a cohesive signage program and provided concise direction for this Outdoor Education experience. Traditional materials were combined with new technology to create an authentic atmosphere that complements the camps rural nature.

Factors that had to be taken into consideration included visibility, durability

and overall cohesiveness within a limited budget. Sign types include main entry identification, assorted building and locational identification signs, directional signs, trail markers, informational signage and commemorative monument signage for specified donors. All sign types were designed and will be fabricated under the close supervision of MVE & Partners Graphic Design Team.
